# Explanation DAC6 dialogue

#	Explanation
	To file a DAC6 report, a data set has to be created. A data set contains at least one CBA submitted through the web form (1A) or through an XML-upload (1B).
1-A	By manually filling in the web form, multiple arrangements can be added to one data set. This way it is possible to manually report multiple CBAs at once. Manually created data sets can be downloaded as a PDF-file and as an XML-file.
1-B	By uploading an XML-file containing multiple CBAs, one data set is created to report these CBAs at once.
2	The DAC6 report is filed by submitting the created data set.
3-A	Each data set has its own processing report which contains details about the status of the filed reports. When the processing report is ready, the discloser will receive a notification by e-mail from the Netherlands Tax and Customs Administration.
3-B	The status of a submitted data set (accepted or rejected) is visible on the overview on the dashboard.
4	The processing report can be downloaded as an XML-file from the overview on the dashboard.
