### Particulars

**Note on the Dialogue for submitting DAC7-reports:**

For DAC7 reports, the validation results are reported back via the Status Message.

Therefore, no status 500 (Validation at requesting party successful) or 510 (Validation at requesting party unsuccessful) will be registered in Digipoort.

So the last status to be reached for DAC7 reports is status 400 (Delivery to requesting party successful) or status 410/425 (Delivery to requesting party unsuccessful / Maximum number of delivery attempts reached).

**Note on Retrieving Status messages**

After a DAC7-report is received by the Netherlands Tax Administration the status 400 will be registered in Digipoort. After processing, a Status message is made available in Digipoort.

To retrieve the Status message, the attribute 'kenmerk' of the Status message must first be retrieved through the Message List (Berichtenlijst). This Message List is regenerated every night in Digipoort.

As a result, the attribute 'kenmerk' of the Status message can only be retrieved the day after the DAC7-report is submitted through Digipoort.

Keep in mind that the result of the delivery is also known the day after.

**Note on Digipoort pre-production environment**

The Digipoort pre-production environment is not intended for testing DAC7 deliveries by organizations other than the Netherlands Tax Administration. This environment is intended for testing by the Netherlands Tax Administration itself. Deliveries from other parties disrupt this testing process.

Moreover, the risk of a data leak is present.

For testing the DAC7 XML-messages, use the [Validation Test Service](#).

For testing the dialog, use the test scenarios in the [Aansluit Suite Digipoort](#):

[Testscenario's submitting DAC7-reports](#)

[Testscenario retrieving a Message List \(Berichtenlijst\) and a Status message](#)

<b>Test facilities</b>	
<a href="#">ValidationTestService VTS</a> (The Netherlands Tax and Customs Administration) The ValidationTestService (VTS) is a service provided by the The Netherlands Tax and Customs Administration and available to software developers. The service offers the opportunity to software developers to check if the XML-messages generated through their software, meet the Message- and Data-specifications applicable for that message. The VTS is only accessible for those with a subscription.
